constituted a sort of settlement or gathering place, most of which remain today as Indian pueblos and retain their names, such as Suin, Tálaga, Avirama, Togoima," Chitoquez, Cuetando, Yaquivá, Pisimbalá, and Itaibe, all of them located at the
361 temperate thermal level. It is precisely along the course of
311 the Páez River and along the middle and lower courses of its
161 tributaries that the Páez population is now concentrated.

● 13 2. Physiography. Merely a single glance at the wild geography of Tierradentro will give an idea of the pattern of life of the Páez people. The physiography of the entire course of the Páez River, from Irlanda to Itaibe, with nearly all of its tributaries, is compressed into profiled accidents. It might be said that it forms a "thermic chimney," Professor Guhl's expression. It belongs to the temperate thermal level. This is the land of the great slopes covered with natural pastures and of the short, narrow vegas with fertile soils. There are those who speak of the fertility of all the soil of Tierradentro, classifying it, consequently, as a privileged zone. The concept proves to be deceptive, because it does not take into account the physiographic factor. We find the usable vegetal layer /296/ only in the extremely narrow vegas of the rivers, ravines, and streams, and in places
13 where the topography becomes a little smoother. The left bank
241 of the Páez River, from Toez to La Plata, is usable for agricul-
[233] ture and stock-raising only with difficulty, given the brutality of the slopes. Every tributary that enters on this side is a deep ravine isolated by ridges running from northeast to southwest. On the other hand, the left bank has important vegas. It is there that plantains, manioc, sugar cane, coca, arracacha, maize, and lately coffee and guadua bamboo are grown. The soils are essentially acid, and the Gramineae grow in abundance

/296 cont./

13 241 and are of very good quality. The wheat and coffee from the municipio of Inzá enjoy a deserved reputation in the republic for the quantity and quality of their crops.

133 134 [241] The Páez River receives approximately 32 watercourses on the left bank, and 17 on the right. It is easy to imagine the ruggedness of the terrain if we bear in mind the fact that each one of them forms an impassable ravine. It is also easy to imagine the magnitude of the erosion, assisted by factors of a cultural nature, such as the systematic battle against herbaceous vegetation by means of the system of annual fires. The violence of the wild waters denudes and even forms veritable rivers of stone, such as are seen at the place called Vicanenga in the municipio of Páez. The streams and torrents sometimes swell to extraordinary proportions. In 1949 the Topa torrent completely washed away its small tributary valley, on which stood the hamlet known by the name of Brisas, now Valencia, a flood which was repeated in April of this year.

241 133 134 [161] Of course, the extent of the workable land does not keep pace with the increase in population. The physiography of the cold thermal level, on the other hand, spreads out and flattens a little, the horizon broadens, the patches of arboreal vegetation increase, and the plots multiply, like veritable chessboards in Mosoco, San José, and Vitoncó. Their soils nourish maize, wheat, potatoes, ullucos, nasturtium, and garlic. On the dividing lines between the plots there rise, like green walls, the plantings of cabuya.

161 361 311 3. Population density. The growth of the indigenous population in general, and of the "white" one in particular, has compelled the former to utilize lands increasingly more difficult, steep, /297/ and sterile, or to emigrate in search of uncultivated land. As early as the time of the Conquest we find notes on the spread of the Páez people to the western slopes of the Central Cordillera, forming such nuclei as Pitayó, Tacueyó, and San Francisco. Nowadays, we find Páez groups on the eastern slopes of the Western Cordillera in the department of Cauca, in the departments of Huila and Tolima, and in the Cauca Valley, as Páez

THE HIGHLAND TRIBES OF SOUTHERN COLOMBIA[1]

By Gregorio Hernández de Alba

INTRODUCTION

Between the *Esmeralda* and *Cara* in Ecuador and the *Quimbaya* in the modern Department of Caldas to the north, the conquistadors, especially Governor Don Sebastián de Belalcázar, found a large number of tribes of different languages and cultures (map 1, *No. 24*; map 7). These tribes occupied the mountains of the complicated Andean system, the valleys of the many rivers, and the slopes toward the low, jungle lands of southeastern Colombia. Because of the fertility of the soils, the mild climate, which was largely cool and healthy, the rich gold and silver mines, and the situation of the lands between the important Colonial centers of Santa Fé (now Bogotá) and Quito, which they were founding, the conquistadors greatly desired to conquer and pacify the tribes, as the Spanish chroniclers and historians call the extermination of the Indians. Some peoples, like the *Pasto* living in the present Department of Nariño, north of Ecuador, readily submitted to the overlordship of the encomenderos and hacendados, and adopted their customs and beliefs. Others, like the *Andaquí*, changed their habitat, and moved down from the region of San Agustín and the headwaters of the Magdalena River eastward to the hot jungles, where they were safe from enslavement. Some, like the *Páez* and *Moguez*, protected by the ruggedness of the Sierras of their territory, resisted the Spaniards and succeeded in large measure in perpetuating their traditions. Others, however, like the *Pijao*, who were seasoned warriors, fought bloodily against the White invaders until they were totally exterminated.

The first historians of the conquest of this part of America[2] held different opinions on the cultural and linguistic relationships between these tribes. Some claimed that the dialects differed so greatly from one tribe to another as to be mutually unintelligible; others maintained that all the peoples of the Andean area of Colombia had the same cul-

[1] This study was prepared in Washington, D. C., where the Bureau of American Ethnology, of the Smithsonian Institution, the Library of Congress, and the Library of the Pan American Union facilitated my investigation as previously the Government of Colombia, my wife (who was also my companion in field work), and my friends, the *Páez* Indians of Tierradentro, had furthered it.
